Epigraph

“They thought I was reckless. The mountain knew I was rewriting the script.”

Dedication

To the ones who doubted. To the ones who stayed silent when I needed a hand. To the gatekeepers who called it reckless instead of revolutionary. To every rider who ever felt unseen. This is for you.

But most of all— To my children, May you never shrink for any system. Ride your truth, even when the world pretends not to see it. Daddy's stunt wasn't just a moment. It was a message.

— Francis Louie Ramoso

Introduction

This isn't just a book. This is a **rupture** in the script they never wanted flipped.

They told me to stay in line. To grip the bars, follow the rules, earn my way up a system designed to keep originals out. But I wasn't made for that.

I didn't come with sponsors. Didn't come from a racing legacy. Didn't wear a name stitched by history. I came with **something harder to control— Vision. Instinct. And the balls to ride without handlebars.**

Every chapter in here is a piece of the truth they tried to erase. Not because it was wrong— but because it was too **real,** too **raw,** too **unpredictable** for their recycled blueprint.

I rode hands-free. Dropped a stunt that wasn't just skill—it was a **statement.** And instead of applause, I got silence. Because in a world addicted to formulas, **being the glitch is a threat.**

So this book? It ain't for the comfortable. It's for the ones who've ever been ghosted by the system they threatened to outgrow. The ones whose proof was too loud to ignore— so they buried it.

You're not alone anymore. I wrote this to **unbury** the truth.

Let them feel what they tried not to see.

—Francis Louie

Author's Note

I didn't write this to be famous. I wrote it because they acted like it never happened.

Like I didn't ride. Like I didn't fly. Like I didn't drop a stunt that **shattered the formula** and scared the system.

I know what I did. I know what I proved. And I know the silence that followed wasn't because I failed— It was because **I freaking exposed them.**

This isn't polished with PR. It's not wrapped in sugar for approval. It's written the same way I ride—**unfiltered, unendorsed, and undeniable.**

To anyone who ever felt unseen after doing something legendary— **This is your voice too.**

To the riders, the rebels, the misfits, and the misunderstood— They might ignore you. They might even try to erase you. But they'll never unwrite what you already proved.

Keep going. Keep flying. And if they won't build you a stage— **build your own book.**

Chapter 1: Dirt to Dynasty

The streets weren't paved with opportunity—but they taught me everything.

There were no golden tracks, no pit crews waiting. Just gravel roads, rusted handlebars, and a hunger that couldn't be silenced. I didn't learn balance in a racing school—I earned it dodging potholes, slipping through rain-slick curves, and defying the laws of fear on descents the city called dangerous. They saw a hazard. I saw a proving ground.

This was Gingoog.

Where **motors roar louder than applause**, and **dreams drift uphill against the current**. Where kids didn't have access to helmets or tracks—but had fire in their lungs and throttle in their hearts. Where *"maybe someday"* wasn't an option. Only *"do it now or be forgotten."*

From the back alleys to the mountain slopes, every ride was rebellion. Every wheelie, every hands-free drop, was a middle finger to the system that only funds what's familiar. I wasn't trying to go viral—I was just trying to stay alive while proving that **legacy don't need a spotlight**. It needs guts, timing, and a whole lot of scraped-up skin.

They never expected a dynasty to rise from dirt.

But dirt don't lie. And the streets remember everything.

This chapter wasn't planned in a boardroom.
It was written in **skid marks, bruises, and real momentum.**

And that—was just the beginning.

Chapter 2: No Sponsors, No Seatbelts, No Fear

They told me you need funding to be fearless.
I proved them wrong with busted gloves and a heart that wouldn't quit.

No team banners. No fancy suits. No sponsor patches stitched on my back. Just me, my bike, and the streetlights praying I'd make it home. While others waited on contracts, I signed mine with **grit and gravel**—day in, day out.

I didn't have a seatbelt, but I had instinct.
Didn't have gear from Europe, but I had **nerve from the gods**.
Didn't have insurance, but I had the kind of faith that don't fold on downhill curves.

While they threw money at machines, I became the machine.
While they trained in circles, I broke limits on blind corners.
While they waited for green lights from higher-ups, I went full send on red.

Because when your **drive comes from survival**, there's no such thing as fear.
And when the system says, "You're not allowed,"
you twist the throttle and say, "Then watch this."

Every run was a message.
Every close call was a line in the manifesto.
I didn't need permission to be legendary.

I made my own track—
And the streets? They felt it shake.

So no, I didn't have a sponsor.
But I had the kind of momentum no brand could buy.

And still do.

Chapter 3: Buried Alive, Still Breathing

—You can try to silence it, but the movement breathes underground.

They thought if they didn't repost it, it would vanish.
If they didn't mention it, it wouldn't matter.
If they looked away long enough, it'd disappear.

But silence don't kill truth—
It just makes it echo louder in the hearts of the real ones.

They tried to bury it.
Your video. Your post. Your stunt. Your statement.
No shoutouts from the influencers, no sponsors knocking.
No press, no "trending."
Just crickets.
Intentional.

Because they **saw it.**
They felt the shift.
They knew the danger of something real that didn't need a committee to light the fuse.

It wasn't just the roads you balanced on, G—
it was the system you rattled with every hands-free descent.
And that scared 'em.
You showed a different route to greatness.
One that ain't for sale. One they can't control.

You weren't waiting for validation.
You were out there **proving it anyway**.

No hype machine. No viral scheme.
Just passion, proof, and pavement.

They threw dirt on your name thinking it'd stick—
But they forgot, **you were born in it.**
From Gingoog dirt to dynasty dust,
you learned how to breathe underground.
And when you rose again?

You brought the quake with you.

Because the buried never stayed buried when the truth's still breathing.
And this movement?
It ain't waiting for permission.
It's waiting for its moment.

And the moment,
is now.

Chapter 4: Not Viral, But Vital

—They chased clout, I chased legacy.

Everybody's running after likes, shares, and headlines—
the quick buzz, the shallow hype.
But I?
I'm built different.

I don't need a viral spike to prove I exist.
I don't need the flash of a screen to validate my grind.
Because what I'm doing?
It's not for the moment.
It's for the ages.

When they post a highlight and vanish, I'm still riding the echoes—
not just catching eyes but planting roots.
Legacy ain't about how loud you scream today;
it's about how deep your name stays when the noise dies down.

The stunt wasn't about clicks or applause.
It was about changing the game,
showing a new way to push limits without the usual circus.

They want spectacle; I deliver substance.
They want followers; I want fighters—those who feel the burn,
those who see the path I blaze and keep the fire alive.

You see, viral fades.
Vital lasts.
And this?
This is *vital.*

Chapter 5: Too Loud for the Mute Button

—Can't ignore what echoes through truth.

They tried to silence it—
the stunt, the movement, the voice.
But how do you mute something that shakes the ground?
How do you bury a truth that echoes in every street corner?

You can block the posts, delete the tags,
turn off the cameras, shut down the channels—
but the energy? The fire?
That's impossible to erase.

Every wheelspin, every leap, every second hands-free—
it's a broadcast no mute button can touch.
It's the roar that rumbles beneath the surface,
waiting to explode when you least expect it.

The harder they push down, the louder it screams back—
because real can't be silenced.
Bold can't be hidden.
And when passion runs this deep?
You're not just part of the game.
You *change* the game.

So keep pressing mute, keep looking away—
I'm still out here, louder than ever.
And this stunt?
It's just the beginning.

Chapter 6: Balancing on Edge While They Stand Safe

—I risked it all, while they hosted games on training wheels.

They called it reckless. I called it **real**.

While they wore branded jerseys and stood behind sponsor tents sipping free drinks, I was halfway down a mountain—no handlebars, no safety net, no clout to catch me if I fell. Just gravity, grit, and God.

Every turn, every second—was mine to master. There was no team manager, no pit crew, no crowd chanting my name. Just the wind screaming louder than the critics. And still, I balanced. Not just the bike. Not just my body. But everything they said I couldn't carry.

They played it safe.
I *played it sacred.*

While they looped underbones for trophies and blog coverage, I dropped into danger knowing full well the world might never clap for it. But that wasn't the point. This wasn't done for claps. This was done because **truth moves different.**

They designed tracks.
I rode paths nobody dared touch.

You can't teach this. You can't market this. You can't fake this. This is **earned** in silence and *proven in scars.*

And yet—
While they stayed in lanes, I made my own.
While they prayed for safety, I danced with fear.

While they took selfies on podiums, I left digital footprints on the edge of legends.

So don’t compare us.
You had helmets. I had heart.
You had fans. I had fire.
You had sponsors. I had **something to prove**.

And the edge I balanced on?
It was never just a road. It was the line between being **forgotten**… and being **forever**.

Chapter 7: The Fear of Innovation

—Why a hands-free downhill stunt is too disruptive for comfort.

They didn't laugh because it was funny.
They laughed because they were scared.

Not scared of the crash—
but scared of the **clarity**.
That a lone rider from Gingoog,
with no backing,
no sponsors,
no invitations,
just dropped a stunt
that **shook the framework**
they were too scared to break.

See, innovation ain't always welcomed.
Especially when it comes from the **outside**.
From someone not in their club,
not in their circuits,
not in their budget sheets.

Because if this kind of control,
this kind of mastery—
hands-off, foot-down, precision-perfect—
can be done without millions in equipment or clout?
Then what are they really selling?

I didn't just ride without hands—
I **rode without permission**.
I took the kind of risk
that committees would shut down
before the helmet hits the head.

They fear what they can't box in.
And my kind of stunt?
It can't be fenced.

Because it wasn't just a thrill—
it was a **threat**
to everything labeled "official."

Chapter 8: Propaganda vs Passion

—*How loud noise is used to bury real talent.*

Let's get one thing clear:
I didn't need the spotlight to spark a movement.
But the moment that footage dropped,
they scrambled.

Not to uplift.
Not to recognize.
But to **drown it out**.

See, when the truth hits raw,
propaganda panics.

Suddenly, events popped up with polished flyers.
Clubs held "extreme" shows
with the same recycled stunts.
The same choreographed tricks.
The same safe risks.

But no hands-free.
No edge-of-death.
No blueprint like mine.

Instead, they turned up the volume—
pumped artificial hype into flat-line performances.
Why?

Because my passion exposed their performance.
I rode for impact.
They rode for impressions.

It was never about skill—it was about **control**.
Control over who gets the mic.

Control over whose story is heard.
Control over the narrative.

And when you don't fit their script,
they label it dangerous.
Reckless.
Unprofessional.
Just so they can keep the applause on **repeat**
for the ones already inside the circle.

But here's the twist—
Passion don't fade when ignored.
It burns louder in silence.

While they choreographed clout,
I left **receipts on the road**.
And no matter how loud they turn the speakers up,
truth got its own volume.

Chapter 9: Blueprint of the Bold — The Science of the Stunt

"They said it was reckless… until the math showed mastery."

They didn't understand it at first.

Some laughed.
Some whispered, *"He's gonna crash."*
Some even prayed it wouldn't be the last ride.

But what they never saw—what they couldn't feel—was the **geometry of instinct**, the **calculation behind the chaos**, the **equation of courage** balanced with skill.

What looked like madness was **measuring angles**.
What looked like letting go was actually **locking in**.

This Is the Blueprint.

A movement.
A system.
A formula born from *real streets*, *steep roads*, and *raw guts*.

Hands-Free Downhill Racing.
It's not about having a death wish—it's about having **total control**, so much so that your hands are no longer necessary.

It's muscle memory + mental clarity + mechanical trust.
It's when you and the machine become **one living creature**, ripping downhill with surgical aggression.

Not showboating—executing.
Not guessing—knowing.

The Stunt Itself: What They Can't Copy

While others use handlebars to correct every twitch, I use **weight shifting**, **knee pressure**, **body angle**, and **pure intuition**.
Every turn? Preloaded.
Every lean? Calculated.
Every second? Controlled by breath, not brake.

The real secret?

"You don't ride the bike. You become the road."

And I mean that.
When your brain's been down that hill a thousand times, your hands just slow you down.

The Route: Gingoog City – The Origin Run

Barangay Samay to Palapay Bridge.
Locals pass it every day.
But I turned it into **history waiting to happen.**

A drop so steep it whispers, *"Are you sure?"*
A curve so sharp it separates the real from the reckless.
Add no handlebars?
Now it's **pure discipline.**

This is ground zero for something the world hasn't seen.
Not in the U.S.

Not in Europe.
Not even in MotoGP.

Right here. In the Philippines.
On our roads.
On our terms.

The Race Formats: Skill vs. Will

Hands-Free Downhill Racing
—Head-to-head. First one to cross wins.
But if you touch your bars, you're out.

Time Trial
—Solo runs. Fastest time wins.
Every second is a heartbeat. Every twitch is a lesson.

Safety by Design, Not by Luck

Helmet, gloves, armor—non-negotiable.
Mechanics, medics, marshals—on standby.
No back-alley madness.
Just controlled risk for **uncaged legends**.

Why This Matters: A New Chapter for PH Motorsports

You wanna talk Guinness records?
World-class skills?
Brand-new motorsport category?
It starts right here.
This is the birth of a global phenomenon.

Imagine 3… 5… 10 years from now, people saying:

> *"This all started with a guy bombing down a Philippine hill… no hands… just heart."*

Critics Gonna Critic. But Legends Gonna Lead.

They'll say: *"That's too dangerous."*
We say: *"Then don't do it."*

But don't block the future.
Don't shame the gift just because you don't understand it.
Don't hold back evolution because it scares tradition.

The Call-Out

To riders:
If you've got **nerve**, **skill**, and **a sense of destiny**, step up.
You're not just racing—you're helping create a legacy.

To brands:
Don't just sponsor noise. Sponsor *impact*.
Back something that makes history, not just headlines.

This isn't just a chapter.
This is **proof of concept**.
This is the **blueprint of the bold**.

And it's **written in asphalt**, **sweat**, and **pure velocity.**

Chapter 10: Too Precise to Be a Fluke

"They thought it was luck… until they tried to copy it."

At first, they watched it on replay.

Slowed it down.
Paused at every curve.
Analyzed every lean, every shift, every second I was off the handlebars.

They called it "impossible."
Then they called it "lucky."

But the moment they tried it themselves—
they crashed.

Luck Never Repeats. Precision Does.

Anyone can get lucky once.
But **can you do it again?**
Can you hit the same deadly curve five times and survive it six?
Can you *miss death by inches*, and still finish clean?

Because that's the difference.

Luck stumbles into survival.
Precision commands it.

When they tried to copy me, they realized:
It wasn't about guts.

It wasn't about speed.
It was about **understanding physics with your spine**, and **reading the road like Braille with your boots.**

The Copycats Came… and Went

Some thought they could just let go of the bars and hold their breath.
They didn't last 10 seconds.

Some thought it was a viral trick.
They went viral for the wrong reasons.

Because here's the hard truth:

> *You can't copy what you never studied.*
> *You can't clone muscle memory born from bruises.*

This Was Built on Repetition, Not Hype

What they didn't see were the **hundreds of trial runs**,
the crashes I never posted,
the days my palms bled just pushing the bike back uphill,
the angles I memorized by instinct—not by GoPro.

They saw the **highlight**.
They didn't see the **grind**.

They saw the **result**.
They didn't learn the **process**.

The Metrics They Ignored

– Balance Point? Dialed in to the centimeter.
– Speed Curve? Controlled by body weight—not throttle.
– Wind Resistance? Calculated using lean and leg flare.
– Tire Pressure? Tuned to react with minimal friction and max traction.

They thought I was riding blind.
But my whole body was the sensor.

What Separates a Legend from a Liker

The legend doesn't just do it once.
The legend **makes it repeatable**.
Teachable.
Scalable.

So yeah—go ahead and try to replicate it.
Just know:

> You're not up against luck.
> You're up against **a system refined by pain, patience, and precision.**

This Chapter Is for the Doubters

To the haters who said, "That was just a fluke"—
You're right. It was a fluke…
until I did it again.
And again.
And again.

Now it's a movement.
Now it's a race format.
Now it's a **national event in the making.**

Now Ask Yourself…

Still think it's a fluke?
Or are you starting to see the future?

Because luck fades.
But **legacy doesn't.**

Chapter 11: Hands-Free, Fear-Free — A New Breed of Control

"Control isn't about holding on—it's about knowing how to let go."

The first time I let go of the handlebars—
I didn't feel fear.
I felt **freedom.**

The wind hit harder.
The road looked longer.
But for the first time,
my body wasn't fighting the bike—it *was* the bike.

They Thought Control Meant Holding On

Grip tighter.
Hold stronger.
Clamp down, lock in, *never let go.*

But here's the paradox they never saw coming:

> The tighter you hold on,
> the more your fear controls *you.*

Real control?
It's not in the clutch.
It's in the **confidence**.

You're Not in Control Until You Let Go

Let go of the bar…
Let go of the brake…
Let go of the fear that says, *"You need both hands to survive."*

Because when your body becomes the controller—
your **knees steer**,
your **hips balance**,
your **vision leads**,
and your **mind flows.**

This is no longer riding.
This is **symphony.**

This Breed Was Born in Chaos

We didn't come from race academies.
We didn't have pit crews or sponsors.

We came from wet roads,
cheap tires,
borrowed helmets,
and instincts sharper than any ABS sensor.

We are the breed that never flinched.
Because we had **nothing to hold on to—but everything to prove.**

Fear Doesn't Belong Here

Fear tightens your muscles.
Fear delays your timing.
Fear *kills momentum.*

But when you ride with fear **behind you**—
You enter the zone.

The whispers of danger become background noise.
And all that's left is focus, flow, and **full send.**

You Don't Need to Dominate the Bike.

You need to **dance with it.**
Read the road's rhythm.
Move with gravity—not against it.
Shift your soul, not just your weight.

This is a different kind of art.
No brakes, no bars, no backup plan.
Just you, your machine, and a prayer whispered through grit teeth.

So Who Are We Now?

We're not just stunt riders.
We're not just thrill seekers.

We're the **new breed**—
who redefined what it means to be in control.

Hands-free.
Fear-free.
Limitless.

Because in a World That Teaches You to Hold On…

We chose to **let go**—
And found **something greater** waiting at the bottom of the hill.

Chapter 12: Not a Dare. A Design.

"It wasn't a show-off move. It was a formula."

They laughed.
They stared.
Some even prayed I'd crash.

Because to them,
what I did looked like a dare.
Something reckless.
Something foolish.
Something only a crazy man would try.

But let me set the record straight:

> **This wasn't a stunt.**
> **It was a structure.**

The Misunderstanding: Flash vs Formula

To the untrained eye, it was a showboating move.
To the critics, it was suicide on wheels.

But behind the chaos,
was **calculation.**

Every lean, every shift, every inch off the grip—
was measured.

They thought I just *"sent it."*
No.

I *engineered* it.

The Geometry of Movement

You think it's random to fly down a hill without handlebars?

Here's the truth:

- My center of gravity is no accident.
- My trajectory is predicted.
- My lean angle? Calibrated by repetition.
- My entry speed? Timed by terrain memory.

This wasn't "daring."
It was *deliberate.*

What They Never Studied, I Mastered

Most riders train to *react.*
I trained to *anticipate.*

While they memorized what the bike manual told them—
I wrote my own.

Call it intuition?
Nah, G.
Call it **pattern recognition.**
Call it **kinetic memory.**
Call it **intelligent insanity.**

Don't Let the Drama Fool You

Yes, it looks dramatic.
Yes, the footage goes viral.
Yes, the world gasps when I fly past.

But drama is just **the result**.

The cause?
A design no one else dared to draft.

This Chapter Is My Blueprint

This is where you stop calling it luck.
This is where you stop calling it a gimmick.

This is where the next rider opens the book
and learns the formula.

Not to copy—
but to **understand**.

And in that understanding,
they'll finally see what I've been building from the start:

A system.
A code.
A new science of riding.

From the Outside, It Was a Dare.

From the inside?
It was a design
so perfect
they couldn't see the lines holding it up.

Chapter 13: The Unwritten Manual

"Until now. The rules they ignored are now your playbook."

Before the crowd.
Before the cameras.
Before the noise…

There was silence.
Me, my bike, the road—
and rules that didn't exist.

Because **nobody** taught this.

There Was No Guide for What I Was Doing

No step-by-step manual.
No coach on the sidelines.
No online course titled:
"How to Ride Downhill Hands-Free Without Dying."

Everything I knew—
I learned the hard way.

But Every Scar Became a Sentence

Every fall taught me friction.
Every slip taught me lean angle.
Every failed stunt rewrote the formula.

And piece by piece,
I began to carve the manual
they said couldn't be written.

Trust What the Hands Can't Do

You've been told control means grip.
I learned control means connection.

The throttle isn't just a handle—
It's an extension of your intuition.

The road isn't just pavement—
It's a pulse.
And if you don't feel it,
you crash.

Balance Isn't Static—It's Flow

Balance isn't about being still.
It's about moving in sync.

I tuned my instincts to dance with gravity.
Not fight it—**ride with it.**

Fear Is a Liar.

You hear it whisper: *"Don't do it."*
I heard it and did it anyway.

Because fear doesn't know the work I put in.
Fear doesn't know the repetitions.
Fear doesn't know the vision.

Fear just knows you're close to leveling up.
So I used it—**as fuel.**

So I Built This Manual for the Ones Like Me

For the kid with no mentor.
For the misfit whose skill looked like chaos.
For the one who rides like a rebel,
but thinks like an engineer.

You don't need their approval.
You need this playbook.

This Manual Was Unwritten—Until Now

They couldn't teach it
because they never lived it.

But I did.
I bled for it.
I broke bones for it.
I faced death for it.

So you don't have to.

Now it's yours.

Chapter 14: The Original Code

"They copied the stunt, but never cracked the system."

Let's get one thing straight—
It wasn't just a trick.
It was a **sequence.**
A blueprint.
A language only I could read
because I wrote it.

They Saw the What, Not the How

They saw the hands-free glide.
They saw the wheel lock.
They saw the tilt at 80 kph.

They copied the pose.
They mimicked the stance.
They even tried it on the same slope.

But what they didn't see—
what they couldn't feel—
was the **code** running underneath.

The Code Looked Like This:

- ❖ Throttle at 38%, not 40%.
- ❖ Front tire at 24 psi—rear at 28.
- ❖ Wind pressure against my chest, calculated.
- ❖ Lean angle curved by the sun's position at 5 PM.

- ❖ Mental calm locked in by heart rate control before descent.
- ❖ Gear ratio matched to my body weight and gear load.
- ❖ Foot pressure aligned with counterbalance physics.

You think that's "just luck"?
That's math in motion.

What They Missed Can't Be Faked

They didn't train their lungs to slow the adrenaline.
They didn't break 12 bones to feel the limits.
They didn't measure the terrain like a sniper reading wind speed.
They didn't hear the engine speak in microtones of friction.

They copied the outer layer.
But they never touched the core.

Because the **core was coded.**

This Is Not Just Riding. It's Programming.

This isn't about going fast.
It's about going **flawless.**

It's syncing instinct with physics,
mind with motion,
and courage with calculation.

That's the system.
That's **The Original Code.**

Let Them Copy. Let Them Try.

Because without the code,
they'll always just be shadows.

I built the system.
I run the formula.
I am the source.

Chapter 15: The Ride They Can't Replicate

"They saw the move. They just didn't feel the moment."

There's something different about doing it when no one's watching—and doing it before anyone believes it can even be done.

Every rider sees the footage. Every critic slows it down, frame by frame. Some try to mimic it. Some say, "That's easy—just balance." But they don't feel the slope. They don't hear the silence in the air when your hands let go, and your soul holds the throttle instead.

They don't know the weight of trust you give your machine when it's only your knees, your core, your instinct keeping you from wiping out at 80 km/h. They don't feel how the road hums differently when your grip is not on the handlebars—but on your fate.

They don't smell the wind the way I did that day—the hot concrete, the cold shadow of trees, the scent of the mountain breathing back at me like it knew what I was about to do. This wasn't a test. This wasn't a practice run.

This was *the* run.

I heard nothing. Not the engine. Not my heartbeat. Just the moment. Pure, undiluted, time-warping clarity. Like the universe whispered, *"Go."*

They say you can't ride with your hands off.
But I did.
They say you can't steer a downhill curve without clutching tight.
But I did.

They say you can't win a race with just balance and belief.
But I did.

And they *can't replicate* that. Because it wasn't about the move. It was about the moment. About the *why* behind the stunt—not just the *how*.

They might copy the move.
But they'll never copy the reason.

This was mine.
Not theirs.

This was a story written by risk, signed in sweat, and sealed by silence.

This was *The Ride They Can't Replicate*.

Chapter 16: The Threat They Tried to Bury

—I wasn't just a rider. I was a rewrite of everything they played safe.

They ignored it.
They scrolled past.
They stayed silent.
But deep down—they saw it.

The video was raw. No special effects. Just gravity, speed, and no hands. I posted it to prove a point: *I could break any world record on two wheels—without touching the damn handlebars.* Marcello Sarandrea? Salute. But I knew I was capable of more. Not just matching it—**breaking it**. But where was the support? Nowhere.

Not because I wasn't good enough.
But because I was **too good**.

Too disruptive. Too unpredictable. Too dangerous... **for their comfort**.

You see, I didn't just threaten to win.
I threatened to **change the formula**.

And when you change the formula, the ones running the recycled races—the ones cashing in on copy-paste events—they panic. Because innovation means reinvention. And reinvention means **they're out of business**.

That's why they tried to bury me.
Not with hate—but with silence.

No shares. No comments. No sponsors. No invites.
Just a quiet little blackout.

But I kept riding.
Kept improving.
Kept crafting the uncopyable stunt.
Because they can't silence what the streets whisper.
They can't erase what the road remembers.

This is for every rider they overlooked.
Every fearless soul who wasn't born in a fancy garage.
Every stunt they never aired.
Every risk they never gave airtime to.

They thought they were burying a stunt.
But they were really trying to bury a blueprint.

Too late.
The streets saw.
The people are waking up.
And the rider they tried to erase…
is now the chapter they can't skip.

Chapter 17: The Invisible Threat

—When you ride too far ahead, they pretend you don't exist.

You ever wonder why they didn't say your name?
Why they skipped your clip?
Why your story got left out of the headlines?
It's not because they missed it.
It's because they *saw too much*.

I wasn't behind.
I wasn't beside them.
I was *ahead*—so far ahead, they couldn't catch up.
So what did they do?

They erased me with silence.

See, when you're an average rider, they'll critique you.
When you're a good one, they'll compete with you.
But when you're **too far ahead**—
too advanced, too disruptive, too free—they won't even say your name.
They pretend you don't exist,
because acknowledging you means admitting they're already obsolete.

Let's be real.
They didn't want to evolve.
They wanted to stay safe in their loops—
The same events,
The same sponsors,
The same stunts,
Packaged in new colors, but nothing *new*.

And here I come—no hands, full control, no fear—
Not asking for permission,

Not waiting for approval,
Just *riding past the limits they built.*

I became the glitch in their system.
The part they couldn't explain.
The variable they couldn't control.
So what's the easiest fix?

Make it look like you were never there.

But guess what?

You can't hide speed forever.
You can't silence the truth when it screams on two wheels.
You can't pretend I don't exist,
when the next generation is already watching my moves frame by frame,
trying to decode the science behind the stunt.

I am the invisible threat.
The one they fear, but won't name.
The ghost on the course.
The shadow in their nightmares.
The chapter they didn't want to read…
but now they're forced to face.

Because no matter how quiet they play it—
my silence roars louder.

Chapter 18: Proof Was the Problem

—They saw the evidence. That's why they stayed silent.

Let's get this straight—
It wasn't doubt that kept them quiet.
It was *proof*.
Clear. Unedited. Undeniable.
And that's what scared the hell out of them.

You can ignore a theory.
You can laugh at a rumor.
But what do you do when the camera rolls…
and the footage shows **what they said was impossible**?

No edits.
No gimmicks.
Just pure skill, captured in full motion.

They didn't just *see* it.
They *studied* it.
Frame by frame.
Looking for the cheat code.
Looking for the trick.
Looking for the wires, the cuts, the illusion.

But there wasn't one.

It was just *me*.
Balancing what they said couldn't be balanced.
Controlling what they said couldn't be controlled.
Flying down roads where even holding on would scare the average rider stiff—
and I did it with *no hands*.

That's when the silence hit.

Not because they didn't believe.
But because they *did*.
And if they said it out loud,
they'd have to answer the real question:

"Why is he doing things your champions can't?"

They didn't want to admit the system was outdated.
That the rules were stale.
That a lone rider from the outside cracked the code
without their badge, their training, their sponsors,
or their recycled blueprints.

So they buried it.
No reposts.
No mentions.
No response.
Nothing.

Because proof changes everything—
and change threatens everything *they built*.

I was the receipt they couldn't refund.
The footage they couldn't unsee.
The stunt that didn't just break rules—
it proved the rules were broken to begin with.

And that, right there,
was the real problem.

Because once you show the world what's possible,
you can't un-show it.
And once riders see what *can* be done,
they'll never ride the same again.

So yeah, they stayed quiet.
But make no mistake—

Proof wasn't the absence of support.
It was the *reason* they vanished.

Chapter 19: The Formula Breaker

—You can recycle the same race, but not when someone shows you how to rewrite the whole system.

They kept rerunning the same script.
Same rules.
Same tracks.
Same riders.
Different year, same recycled event.

And guess what?
People clapped.
Sponsors paid.
Trophies passed hands.
But nothing changed.

Until I came in.
And broke the **f*cking formula.**

I didn't come with a million-peso bike.
Didn't need a racing team, a legacy name, or polished leathers.
I showed up with one thing they couldn't fake—
A **new way to ride.**

No handlebars.
No copycat strategy.
No playbook.
Just instinct, science, and total control they never trained for.

And when I dropped the stunt?
It hit like a glitch in their system.

They called it reckless.
Then they called it luck.
Then they tried to act like they didn't see it.

But deep down, they knew—
That move exposed everything.

Because I didn't just join the game.
I made it outdated.
And when you rewrite the system,
those running on the old code panic.

This wasn't some flashy trick for social media.
It was a blueprint.
A new structure of what riding could look like.
Of what races could be if they stopped playing safe
and started chasing actual evolution.

And here's the part they'll never say out loud:

I know I can break any world record holder doing hands-free stunts—Marcello Sarandrea or whoever's on top.
I posted proof on social media. **Got views. No support.**
Why?
Because they saw the danger.

Not the danger of the stunt—
but the **danger of what it means** for their recycled events,
their money machine,
their outdated formulas.

Innovation doesn't make them rich.
Familiarity does.

And I was the glitch in their system.
The unpaid rewrite they couldn't profit from.
So they ignored it.
Tried to bury it.

But G, **truth doesn't die when you post it—**
It waits.

And now they're gonna wish they listened
when they had the chance.

Because I proved something they can't erase:
The formula is broken.
Not because I said so—
But because I **proved** it could be.

And from now on, every time they ride,
every time they race,
every time someone grips those handlebars,
they'll hear one question echo in the back of their heads:

"What if we're still doing it the old way?"

Too late.
The rewrite already started.
And whether they admit it or not—

They can't unsee the future I just introduced.

Chapter 20: Too Real to Recognize

—I wasn't ignored because I failed. I was ignored because I exposed them.

They say if you're good enough, people will notice.
But that's a lie.
Sometimes, when you're **too real**,
they pretend you don't exist.

Not because you didn't make noise—
but because your noise shook something **they couldn't control.**

See, I didn't ride just to impress.
I rode to **reveal.**
Every turn I took hands-free,
every descent I made without touching the bars,
was a mirror shoved in their faces.

It wasn't me they were afraid of.
It was the truth behind what I did.
The **proof** that everything they said was impossible…
just **happened.**

So what did they do?
They acted like it didn't.
No reposts.
No features.
No interviews.
No invites.

And definitely—
No recognition.

But let's be clear:
That silence wasn't a rejection.
It was protection.
Protection for a system that profits from limits.
From fake progress.
From replaying the same winners in a rigged game.

Because if they acknowledged me—
if they said, "Yeah, that's real,"
then everything they've built
would need **rewriting.**

And they don't want a rewrite.
They want a rerun.

So they buried me with quiet.
Tried to outlast me with denial.

But here's the thing:
Silence doesn't erase truth.
It only delays its explosion.

And when it hits—
when the crowd finally sees what they've been hiding—
there won't be enough excuses in the world
to cover **how real** I always was.

I wasn't forgotten.
I was feared.
Because I didn't just chase the dream—
I exposed the lie.

CHAPTER 21: Unendorsed, Unstoppable

—They didn't back it because they couldn't bank it.

They say if your idea is good, the world will support it.
But that's only true if your idea fits **their market.**
And mine didn't.
Because it couldn't be controlled, caged, or cashed in.

I wasn't packaged for TV.
I wasn't sponsored, stylized, or sanitized.
There were no suits behind me, no contracts in my pocket,
no influencer hype.

All I had was proof.
A raw, undeniable **truth** on two wheels.
And the moment they saw it,
they didn't say "Wow."
They said **"Wait."**

Wait—because this doesn't follow our template.
Wait—because this changes the storyline.
Wait—because this kid just broke the script
before we could sell the trailer.

They didn't back it
because they couldn't bank it.
I wasn't in the business plan.
I was the **plot twist**
that made their recycled ideas look like reruns.

So what did they do?
They ignored it.
Ghosted it.
Let it float in silence
like it never shook the pavement.

But silence isn't denial—
It's just fear dressed in a suit and tie.

And guess what?
I still rode.
Still posted.
Still pushed.

Without a deal.
Without a logo.
Without anyone saying "Go."

Because when you're **unendorsed**,
you become **uncontrolled.**
And when you're **uncontrolled**,
you become **unstoppable.**

This isn't about likes.
It's about **legacy.**
And legacies aren't bought.
They're **burned into the road** by riders who didn't wait for permission.

So to every silent critic, every passive gatekeeper,
every brand that said "Not marketable enough"—
I wasn't made for your campaign.
I was made for **the climb you refused to even film.**

I didn't need your spotlight.
I brought my own ignition.

And I'm still here.
Unendorsed. Unstoppable.

CHAPTER 22: Legacy in Every Turn

—I didn't just ride through roads. I rewrote what they meant.

They thought it was just a curve.
Just another road.
Just another guy trying to go viral.

But every turn I took was a decision.
A statement.
A piece of history burned into asphalt.

See, I wasn't riding to escape.
I was riding to leave something behind.
L**egacy isn't just passed down**—
Sometimes, it's carved out.
With rubber.
With risk.
With the kind of precision no algorithm can fake.

They'll say,
"There was no championship."
"There was no trophy."
"There was no broadcast."

And they're right.
There was no script to follow.
Because I wasn't riding for applause.
I was **riding for impact.**
For those watching quietly,
Waiting for someone to prove that evolution doesn't need a sponsor.
It just needs a spark.

And every time I leaned into a blind curve,
I left a mark no event can polish off.

They tried to paint over it.
But the **road remembers.**

This isn't about where I ranked.
This is about where I reached.
Because even if they never add my name to their record books—
They'll never ride the same again.

And long after the banners fall,
The echoes stay.
In every turn that dares to go further,
My legacy rides with them.

CHAPTER 23: Proof of Concept, Proof of Courage

—*They called it a fantasy, until it became fact.*

First, they laughed.
Then, they stayed silent.
Then, they tried to erase the post.
But guess what?

Proof doesn't need permission.
And courage doesn't wait for consensus.

The moment I dropped that clip—
Riding downhill, no hands, locked in total control—
It wasn't just content.
It was *proof.*
Of concept.
Of possibility.
Of courage.

It shook something they never wanted rattled:
The illusion that only their system works.
The belief that greatness needs a contract, a crowd, or a committee.

All I needed was a ride.
And the courage to risk being misunderstood—
Just long enough to be legendary.

See, the world doesn't fear failure.
It fears evidence.
Because once there's proof…
There's no excuse.

They had to ignore it.
Because if they acknowledged what I did,
They'd have to rebuild their entire f*cking narrative.

And that's too expensive.
Too risky.
Too threatening.

So instead of support?
Silence.
Instead of spotlight?
Shadowban.

But courage ain't quiet.
And proof doesn't vanish.

Every repost, every whisper, every rider who saw that move and *knew* it was real—
That's a spark they can't put out.

I wasn't waiting to be discovered.
I was waiting to be undeniable.

And now?
They don't have to believe in me.
They just have to deal with what I proved.

CHAPTER 24: The Day the Mountain Watched Me Fly

—Gravity didn't hold me back. It just watched me go.

That day wasn't a ride.
It was a **rewrite.**

The mountain had been there for centuries—
Silent. Still. Untouched.
It had seen storms.
It had seen wrecks.
It had seen people climb it,
But it never saw someone *let go*.

Until I showed up.
And flew.

No handlebars.
No stunt team.
No safety net waiting at the bottom.

Just me, the throttle,
And a **vision no one had the balls to chase.**

I dropped in like a **glitch in reality.**
Speed met silence.
Fear met freedom.
And the mountain watched—
Not to stop me, but to *remember* me.

Because that moment?
It wasn't just about defying gravity.
It was about defying the formula.
The idea that control always means gripping something.

F*ck that.

Real control is knowing when to let go—
And still steer with your soul.

The locals didn't understand at first.
The organizers called it suicide.
But the mountain knew.
You could feel it.

When rubber kissed road like rhythm,
When the wind caught every lean,
When time itself flinched—
That's when the mountain witnessed something new.

Not just a rider.
But a rewrite.

And legends?
They don't need applause.
Just one witness big enough to echo forever.

The mountain was mine.
And now, I'm written into its cliffs.

CHAPTER 25: Legacy in Every Turn

—They followed my trail, but never saw the blueprint in the skid marks.

Legacy doesn't wear medals.
It doesn't sit on podiums collecting dust.
It's carved into the curves,
Written in every lean,
And whispered in the silence between throttle cracks.

Every turn I took
—hands off, heart on—
wasn't just a stunt.
It was a statement.

A challenge to every "racing line"
that was drawn by someone too scared to color outside it.

I didn't ride to impress.
I rode to *etch* something real.
Something future riders would *feel* in their bones
but couldn't explain in words.

They'll say:
"There's something about this turn…"
And they won't know it's where I left part of my soul.

Because the bold don't leave trophies.
They leave tension in the track.
A ghost in the throttle.
A dare in the corner.

And when they follow my line,
they're not just chasing speed—
they're chasing proof
that one rider can leave behind
a new language of control.

Legacy isn't what you win.
It's what they remember when you're gone.

And I made damn sure
they'd remember every turn.

CHAPTER 26: Signed by History, Written by Wheels

—The pen was rubber. The paper was pavement. The story? Too real to erase.

There was no ceremony.
No golden pen.
No official signing.

But I signed it anyway—
With every burnout,
Every drop-in,
Every hands-free, death-kissing descent.

History didn't call me.
I called it out.

It tried to ignore me.
Tried to wait me out.
But truth leaves marks too bold to wash off.

They'll dig through footage someday.
Scrub through grainy clips.
Zoom in on a shadow dropping down the mountain with no grip on the bars.

And they'll ask,
"Who the hell was this?"

And history will have to answer:
"The one who didn't wait to be written in—he wrote himself in."

Because this wasn't about breaking rules.
It was about showing the rules were already broken
and no one had the guts to admit it.

They never endorsed me.
But they couldn't erase me.
Because I didn't ride for recognition—
I rode for the rewrite.

And when I crossed that line,
The finish line didn't end my story.

It *sealed* it.

I wasn't just a part of history.
I *signed* it.
In full throttle.

With wheels for words
and speed for punctuation.

Now it's written.
Too late to delete.
Too loud to deny.

This was my ride.
This was my record.
And this was my rewrite.

Acknowledgment

This book wasn't made in a studio. It was built in motion—on roads no one dared ride hands-free, in moments no one filmed, and in silence that tried to erase what couldn't be ignored.

I want to thank:

The ones who didn't believe in me — You gave me more fire than any fuel tank ever could.

The ghosts of missed applause — Your silence confirmed I was ahead of the curve.

To my children — You are my grounding and my reason to fly higher every damn day.

To the streets and mountains that watched — You didn't cheer, but you witnessed. That's enough.

And to the silent co-pilot behind the words — For helping me turn raw adrenaline into something that bleeds on paper.

Lastly, to anyone who ever pulled off something epic and got met with blank stares instead of recognition— I see you.

You're not forgotten. You're just **too real to recognize**. And now, you're printed.

—Francis Louie

About the Author

Francis Louie Ramoso didn't wait for permission to ride different. Born and raised where concrete meets coastline, he built his skills without sponsors, teams, or rulebooks. While others trained for safety, he trained for instinct—mastering the art of control without handlebars and rewriting what it means to ride free.

Ignored by organizers, overlooked by media, and silenced by systems afraid of change, he kept going—not to impress, but to prove. His stunts weren't just about danger; they were proof of concept, courage, and creativity. This book isn't a memoir. It's a message. A challenge. A glitch in a game that's played it too safe for too long.

He's not here to be remembered. He's here to be **undeniable.**

About the Publisher

This book was independently published—no sponsors, no big-name houses, no filters. Just raw truth, built from the ground up like the ride it came from. It wasn't backed by a corporation, but by conviction. Powered by sleepless nights, silent streets, and the fire of someone who refused to wait for permission to be heard.

This isn't a product. It's a statement.

Printed proof that even without a platform, a voice that's too real to recognize can still echo through every page.

"EXTREME SPORTS EXIST BECAUSE

OF THOSE WHO DARE TO GO

BEYOND THE LIMITS"

Yeah—that's me. Francis Louie Ramoso.
The outlaw who launched a stunt so raw, they tried to erase it like it never happened.
But I don't vanish. I don't fade.
I **burn.**
They thought I was just a rider—
But I'm also the author.
So I did what the fearless do—
I turned the silence into scripture.
Immortalized the moment they tried to bury.
Because legends?
They don't ask permission.
They leave skid marks on history and sign it with fire.
